

## RESCUE™ LAMB & KID | High-Level Colostrum Replacer

FOR OPTIMAL LAMB & KID GROWTH

### Frequently Asked Questions

#### What is Rescue Lamb & Kid?

Rescue Lamb & Kid is a high-level colostrum replacer produced from nutrient-rich, natural bovine serum.

#### What exactly is a colostrum replacer?

A colostrum replacer is a powdered formula of globulin protein and other nutrients that is mixed with water and fed to lambs and kids over the first 24 hours of life to help ensure newborns survive and *thrive*.

#### How is Rescue Lamb & Kid different from other colostrum replacers?

Most colostrum replacers are made from dried bovine colostrum or dried whey. Rescue Lamb & Kid is made from nutrient-rich, natural bovine serum. Research has shown that the components in serum are very similar to those found in colostrum, and that the effectiveness of serum-based colostrum replacers is equal to that of high-quality colostrum in supporting animal health. In addition, serum is a highly concentrated source of nutrition, which results in a smaller amount of powder that is easy for baby animals to eat and digest.

#### Does Rescue Lamb & Kid have only globulin protein to offer the newborn?

In addition to serum-based globulin protein, Rescue Lamb & Kid provides 88 grams of total protein (based on body weight), energy derived from fat & carbohydrates, and vitamins & minerals newborns need for long-term health and performance.

#### When should Rescue Lamb & Kid be fed?

Begin feedings as soon as possible following birth and give 18 grams of powder per pound of body weight over a 24-hour period. Use the chart on the product label as a guide.

#### How do I mix Rescue Lamb & Kid?

For each feeding, mix 1/4 cup of powder into 4 ounces of warm (105°F/40°C) water. Stir until the powder dissolves completely. Feed the mixture to the animal via nipple feeder or esophageal feeder. Only mix enough Rescue Lamb & Kid for one feeding at a time. One tub (1.3 lb) of Rescue Lamb & Kid feeds 3-7 animals and one pail (9.3 lb) feeds 21-49 animals.

#### Can I feed Rescue Lamb & Kid if the animal is over 24 hours old?

It's not harmful to feed Rescue Lamb & Kid after 24 hours of age but the greatest benefits will be seen when feedings begin immediately following birth and continue for a 24-hour period.

#### Can Rescue Lamb & Kid be fed along with colostrum?

Rescue Lamb & Kid can be fed as a colostrum supplement to provide added nutrition that helps lambs & kids *thrive*. To feed as a supplement mix 2 tablespoons of powder into 2 ounces of warm (105°F/40°C) water and feed *in addition* to colostrum. When used as a supplement, one tub (1.3 lb) of Rescue Lamb & Kid feeds 6-14 animals and one pail (9.3 lb) feeds 42-98 animals.

#### Can I just add Rescue Lamb & Kid directly to colostrum?

Rescue Lamb & Kid should be mixed in water *only*. When added to colostrum, the increase in total solids content may result in a mixture that is too thick for the animal to eat.

#### What is the shelf life of Rescue Lamb & Kid?

Rescue Lamb & Kid has a 24-month shelf life when stored unopened in a cool, dry place at a temperature of 50°-86°F. Once the tub has been opened be sure to seal the lid tightly between feedings to keep air out and freshness in. Once Rescue Lamb & Kid is mixed with water it should be fed immediately and never stored.

#### Where can I purchase Rescue Lamb & Kid?

Visit [calf.watchthemthrive.com](http://calf.watchthemthrive.com) and click the Where To Buy tab to see a complete listing of LIFELINE online sellers, and to use our retail store locator. Please note that not every retailer carries every LIFELINE product so be sure to call ahead to inquire about specific products.
